Will You See Higher Tax Rates in 2011?

rates expire? There's plenty of time to see 2011, so stay tuned. The top marginal federal income tax bracket was 39.6%, and the tax rate that applied to most long-term capital gains

was 20%. Then came the Economic Growth and Tax Relief Reconciliation Act of 2001, followed two years later by the Jobs and Growth Tax Relief Reconciliation Act of 2003. By mid-2003, the top marginal tax rate was 35%, and the 20% capital gains rate had dropped to 15%. But this tax relief was designed to be temporary--the provisions that established lower rates were crafted to self-expire after a period of time. And now, in 2010, we're only months away from seeing those provisions expire.

Federal income tax brackets

Right now, there are six marginal income tax brackets: 10%, 15%, 25%, 28%, 33%, and 35%. For 2010, these brackets apply to married couples filing joint federal income tax returns in the following manner:

2010 Marginal Income Tax Brackets	
Married Filing Jointly	
Taxable Income	Marginal Tax Rate
Not over \$16,750	10%
Over \$16,750 to \$68,000	15%
Over \$68,000 to \$137,300	25%
Over 137,300 to \$209,250	28%
Over 209,250 to \$373,650	33%
Over \$373,650	35%

As it stands now, these marginal tax brackets will expire at the end of 2010. There would be no 10% bracket for 2011, and the remaining bracket rates would return to their original 2001 levels: 15%, 28%, 31%, 36%, and 39.6%.

Long-term capital gain tax rates

For 2010, if you sell shares of stock that you've held for more than a year, any gain is long-term capital gain, generally taxed at a maximum rate of 15%. If you're in the 10% or the 15% marginal income tax bracket, however, you'll pay no federal tax on the long-term gain (a 0% tax rate applies). That means if you're a married couple filing a joint federal income tax return, and your taxable income is \$68,000 or less, you'd pay no federal tax on the gain.

However, these rates are also scheduled to expire at the end of 2010. Absent new legislation, in 2011, a 20% rate will generally apply to long-term capital gains. Individuals in the 15% tax bracket (remember, there won't be a 10% bracket in 2011) will pay the tax at a rate of 10%. Special rules (and slightly lower rates) will apply for qualifying property held for five years or more.

Finally, while qualifying dividends are taxed in 2010 using the same capital gain tax rates described above (i.e., 15% and 0%), in 2011 they'll be taxed as ordinary income.

Will Congress take action?

In the proposed 2011 budget submitted to Congress in February, President Obama asked for a permanent extension of the current 10%, 15%, and 25% marginal income tax brackets, and an expansion of the current 28% tax bracket. The current 33% and 35% brackets would be allowed to expire, resulting in the top two marginal rates for 2011 returning to 36% and 39.6%. The expanded 28% bracket would be calculated in a way that would allow individuals earning less than \$200,000 (less the standard deduction amount and one exemption) and married couples filing jointly earning less than \$250,000 (less the standard deduction and two personal exemptions) to escape taxation at the top rates.

The President also proposed making the current tax rates that apply to long-term capital gain (i.e., the 0% and 15% rates) permanent, but adding a new 20% rate for those in the newly reestablished 36% and 39.6% brackets.

Will Congress act, or will it simply let current

Social Security: File-and-Suspend for Higher Benefits

Stock Dividends: An Income Alternative

Will the new health-care law affect my Medicare drug plan?

Although many people think of Social Security as only a retirement program, Social Security also provides survivor's benefits that can provide substantial income to your spouse after your death.

For more information, contact the Social Security Administration at 800-772-1213 or visit www.socialsecurity.gov.

Social Security: File-and-Suspend for Higher Benefits

If you're married and looking for opportunities to increase retirement income, you may want to look closely at your Social Security benefits. One opportunity for maximizing Social Security income, called "file-and-suspend," may enable a married couple to boost both their retirement and survivor's benefits.

What is file-and-suspend?

Generally, a husband or wife is entitled to receive a Social Security retirement benefit based either on his or her own earnings record (a worker's benefit), or on his or her spouse's earnings record (a spousal benefit), whichever is higher. But under Social Security rules, a husband or wife who is eligible to file for retirement benefits based on his or her spouse's record cannot do so until his or her spouse begins receiving benefits. However, there is one exception--someone who has reached full retirement age may choose to file for retirement benefits, then immediately request to have those benefits suspended, so that his or her eligible spouse can file for spousal benefits.

File-and-suspend is a strategy that may be used in a variety of situations, but is commonly used when one spouse has much lower lifetime earnings, and thus will receive a higher retirement benefit based on his or her spouse's earnings record. (A husband or wife's spousal benefit may be as much as 50% of what his or her spouse is entitled to receive at full retirement age.) Using this strategy not only allows the eligible spouse with lower earnings to immediately claim a higher (spousal) retirement benefit, but can also increase the amount of available survivor protection. The spouse with higher earnings who has suspended his or her benefits can accrue delayed retirement credits at a rate of 8% per year (the rate for anyone born in 1943 or later) up until age 70. Because a surviving spouse will generally receive a benefit equal to 100% of the retirement benefit the other spouse was receiving (or was entitled to receive) at the time of his or her death, suspending a benefit to accrue delayed retirement credits may substantially increase the survivor's benefit.

Example

Let's look at one hypothetical example of how filing for, then suspending, Social Security benefits might help a married couple increase their retirement income and survivor's benefits.

Henry is about to reach his full retirement age of 66, but he wants to postpone filing for Social Security benefits. At full retirement age his monthly benefit will be \$2,000, but if he waits until age 70 to file, his benefit will be \$2,640 (32% more) due to delayed retirement credits. However, his wife Julia, who has had substantially lower lifetime earnings than Henry, wants to retire in a few months at her full retirement age (also 66). Based on her own earnings record, Julia will be eligible for a monthly benefit of \$700, but based on Henry's earnings record she will be eligible for a monthly spousal benefit of \$1,000 (50% of Henry's entitlement).

So that Julia can receive the higher spousal benefit as soon as she retires, Henry files an application for benefits, but immediately suspends it. That way, he can also continue to earn delayed retirement credits, which will result in a higher monthly retirement benefit for him later.

Using the file-and-suspend strategy not only increases Julia and Henry's retirement income, but it also offers increased survivor protection. Upon Henry's death, Julia will be entitled to receive 100% of what Henry was receiving (or was entitled to receive) at the time of his death. So by suspending his own retirement benefit in order to increase it through delayed retirement credits, Henry has ensured that Julia will receive a survivor's benefit that is up to 32% higher for the rest of her life should he die first. (Note, though, that this hypothetical example is for illustrative purposes only and does not account for cost-of-living adjustments or taxes.)

Points to consider

- Deciding when to begin receiving Social Security benefits is a complicated decision. You'll need to consider a number of scenarios, and take into account factors such as both spouses' ages, estimated benefit entitlements, and life expectancies. A Social Security representative can help explain your options.
- Ask a tax professional to help you weigh the tax consequences of delaying Social Security income.
- Using the file-and-suspend strategy may not be advantageous when one spouse is in poor health or when Social Security income is needed as soon as possible.
- The spousal benefit will be reduced if the spouse claiming it is under full retirement age.

Stock Dividends: An Income Alternative

"Many dividend-paying stocks represent large established companies that may have significant resources to weather economic hard times."

Since 2003, when the top federal income tax rate on qualified dividends was reduced, dividends have acquired

renewed respect. When (or if) that tax rate increases (under current law, dividends will once again be taxed as ordinary income in 2011), the long-term demand for high-quality, reliable dividends will likely increase as baby boomers approach retirement and focus on income-producing investments.

Why consider dividends?

Because they can add to a stock's total return, dividends can be especially important if the market produces relatively low or mediocre returns. According to Standard and Poor's, dividend income has represented roughly one-third of the total return on the S&P 500 since 1926, though that percentage has declined over the last decade. Dividends also may mitigate the impact of a volatile market by at least partly offsetting price fluctuations to even out a portfolio's overall return.

Many experts also look at dividends as a relatively reliable indicator of a company's financial health. Investors have become more conscious in recent years of the value of dependable data as a basis for investment decisions, and dividend payments aren't easily restated. Because dividends are one sign of a company's financial health, boards of directors generally are reluctant to send investors a negative message by cutting dividends.

Also, many dividend-paying stocks represent large established companies that may have significant resources to weather economic hard times, which could be helpful if you're relying on those dividends to help pay living expenses.

Finally, dividends become even more valuable if they're reinvested rather than used to supply income. A dividend that's used to purchase more of the company's stock means you'll receive a proportionally greater share of the company's earnings the next time dividends are paid, which in turn means a larger dividend payment to be reinvested (assuming the company continues to do well and the dividend rate remains the same).

Look before you leap

Investing in dividend-paying stocks isn't as simple as just picking the highest yield. If you're investing for income, consider whether the company's cash flow can sustain its dividend. Dividends on common stock are paid at the discretion of the company's board of directors, and there's no guarantee they won't be cut.

Also, some companies choose to use corporate profits to buy back company shares. That may increase the value of existing shares, but it sometimes takes the place of instituting or raising dividends.

If you're interested in a dividend-focused investing style, look for terms such as "equity income," "dividend income," or "growth and income." Also, some exchange-traded funds (ETFs) track an index that's comprised of dividend-paying stocks, or that's based on dividend yield. Be sure to check the prospectus for information about expenses, fees, and potential risks, and consider them carefully before you invest.

All dividends are not alike

Some dividends, such as those paid by real estate investment trusts (REITs) and master limited partnerships, don't qualify for the same maximum federal income tax rate as qualified dividends, and a portion may be taxed as ordinary income. Also, the 15% maximum rate is scheduled to expire at the end of 2010, and there is no guarantee dividends will continue to receive favorable tax treatment.

The 15% rate applies to qualified dividends (those paid by a U.S. or qualified foreign corporation). Also, you must have held the stock for more than 60 days during a 121-day period (60 days before and 61 days after the stock's ex-dividend date). Form 1099-DIV, which reports your annual dividend and interest income for tax accounting purposes, will indicate whether a dividend is qualified or not.

Be aware that some so-called dividends actually are considered interest for tax purposes. These include dividends from deposits or share accounts at cooperative banks, credit unions, federal savings and loan associations, and mutual savings banks.

Will the new health-care law affect my Medicare drug plan?

Yes, it might. Many Medicare Part D beneficiaries have had to pay for prescriptions out-of-pocket after reaching a gap in their annual coverage, referred to as the "donut hole." Currently, if you're a Medicare Part D beneficiary, you may pay up to an additional \$3,610, out-of-pocket, for medicines after reaching an initial threshold of \$2,830 in total prescription drug costs (including Part D payments, beneficiary co-pays, and deductibles). But, in 2010, if you fall in the coverage gap, you will receive a \$250 rebate.

Starting in 2011, you will receive a 50% discount on the cost of brand-name drugs in the coverage gap. Additionally, a reduction in coinsurance for generic drugs in the coverage gap will be phased in, starting in 2011, and a similar reduction in coinsurance for brand-name drugs begins in 2013. By 2020, a combination of federal subsidies and a reduction in co-payments will reduce your total out-of-pocket costs for medications in the donut hole to 25%.

Another change affecting Medicare Part D beneficiaries relates to full-benefit dual-eligible beneficiaries (individuals eligible for both Medicaid and Medicare). Dual-eligible beneficiaries receiving institutional care, such as in a nursing home facility, do not owe any co-payments for prescriptions covered by Part D. However, dual-eligible beneficiaries receiving long-term care services at home or in a day-care community setting are subject to such co-payments. Beginning in 2012, the new legislation removes this imbalance; individuals receiving services at home or in a community setting will no longer be subject to co-payments.

Also, beginning in 2011, the time period during which Part D and Medicare Advantage beneficiaries can make changes to their coverage is extended and runs from October 15 through December 7. This extension should provide more time for beneficiaries to consider their options while ensuring that any benefit changes are properly incorporated into the plan for the following year.

Does the new health-care reform law affect health spending accounts?

Yes. The new health-care reform legislation impacts flexible spending arrangements (FSAs), health reimbursement arrangements (HRAs), health savings accounts (HSAs), and Archer medical savings accounts (MSAs).

Over-the-counter medications. Beginning in 2011, FSAs and HRAs will not be able to make reimbursements for the cost of over-the-counter medications, and HSA and Archer MSA distributions used to pay for the cost of over-the-counter medications will not be made on a tax-free basis. However, insulin and over-the-counter medications prescribed by a physician will still be reimbursable on a tax-favored basis by these plans. You may want to stock up on your over-the-counter drugs to take advantage of the available reimbursement before the end of this year.

Tax increase on nonqualified distributions. Generally, distributions from HSAs and Archer MSAs for qualified medical expenses are received income-tax free. Plan distributions

for other than qualified medical expenses are subject to ordinary income tax plus a penalty tax. In the case of HSAs, the penalty is 10%, and for Archer MSAs the penalty is 15%. However, the health-care reform legislation increases the tax penalty for both of these plans to 20%, beginning in 2011.

FSA contribution limit. If you participate in an FSA as part of a cafeteria plan, beginning in 2013, the annual amount available for reimbursement for qualified medical expenses is limited to \$2,500 (this figure will be adjusted for inflation in subsequent years). This reduction does not apply to health FSAs that aren't part of a cafeteria plan.

If these changes will affect you, and you or a family member needs substantial dental work such as orthodontia, or corrective vision surgery, you might want to plan for and address these needs prior to 2013. And remember, FSAs are subject to the "use it or lose it" rule, meaning that any pretax money in your plan that is not used by the end of the plan year is forfeited.
